ABOUT US

Jonas Software is a well known and highly respected brand in the United States and throughout the world. Our Metals Software has a long history dating back to the early 1970's with the advent of the affordable business computer.

Jonas Metals Software has been active in various mergers and acquisitions which have developed into the global brand we know today.

Founded in 1971 in La Palma CA, Compusource evolved into a leading developer and marketer of software, computer equipment, and training/support services for the Metal Services Center industry. Great success was achieved through professional partnerships with our customers where the central focus is on long-term mutually beneficial relationships. **In August of 2009 after many years of being an independent market leader Compusource was acquired by Jonas Software. This was followed in 2013 by the acquisition of Metalogic Holdings and PCI leading suppliers to the UK and European markets.**

Metalogic Ltd was formed in 2000 as the result of a merger of two of the UK's leading specialist suppliers of computer systems to the metals industry – Beacon Computer Services (Metals Division) and Planmatics PLC both with over 20 years' experience within the sector. With the addition of Kalamazoo software clients and organic growth, Metalogic has gone on to be the major supplier of specialist software to the metals market in the UK and Europe

Since 1981 PCI Systems Ltd has provided integrated IT solutions that have been specifically designed and developed for the

Metals industry, encompassing stock holders, service centers and processors. Customers range from large multi-site operations to companies specializing in a lower volume bespoke service and are distributed across the United Kingdom.

Jonas Metals Software offers exceptional support coverage that stretches throughout the globe. With the backing of a large organization that provides security and support by allowing us to be small enough to care but big enough to take on the largest of challenges. Our systems are supported by the people who work in the business not outsourced to contractors – meaning you will receive an outstanding service that is second to none from a team that cares about our clients with a dedication that goes above and beyond the call of duty.

Jonas Software is an operating group of Constellation Software, Inc. One of the world's fastest growing software companies – CSI is an international provider of market-leading software and services to a number of industries, both in the public and private sectors. Our mission is to acquire, manage and build market-leading software businesses that develop specialized, mission-critical software solutions to address the specific needs of our particular industries.

With over 125,000 customers, CSI operates in over 100 markets around the world. CSI has offices in North America, Europe, Australia, South America and Africa, and has over 15,000 employees generating consolidated revenues exceeding US\$3 billion.

Specialized Software for Specialized Needs

Our customers handle every form of material including Coil, Sheet and Plate, Bars, Sections, Meshes, Pipe and Tube, Fittings and Manufactured Components, Billets and Ingots.

They also undertake every kind of process that these products are subject to from Decoiling, Slitting and Shearing, through to Plate and Bar Sawing, Profiling, Rolling and all forms of machining including finishing processes such as Shot Blasting, Painting, Polishing, Poly-Coating and Testing.

We offer our customer's multi-language, multi-currency, multi-branch, multi-product and multi-process functionality. These are installed at every type of metals manufacturing and distribution business. The products are highly scalable and can be efficiently and cost effectively implemented and supported in businesses ranging from 5 to over 700+ users.

ADDITIONAL SERVICES

iMetal ERP gives you the power to process quickly and plan more efficiently, enabling you to reduce costs, sharpen forecasts and provide better service.

Infrastructure & Hardware

Jonas Metals Software offers its clients full turnkey services for network and infrastructure planning as well as hardware supply, configuration and installation. All with the backing of full support services.

This means we act as a "one stop shop" in carefully defining your Local and Wide Area Network Infrastructure requirements and hardware requirements finding and supplying the optimum solutions, and setting up and installing the infrastructure on site.

Cloud – Leverage iMetal Application

iMetal can move you to the cloud faster, more easily with less risk. Benefit from substantial IT cost savings, as well as improvements in productivity, operational reliability, security, advanced analytics, operational control and unmatched visibility.

31% Infrastructure cost savings average vs onsite

62% More efficient IT infrastructure management vs on premises

Our customers don't care how much we know, until they know how much we care

Our client facing team members have many years of experience working in and supplying the metals sector with functionally specific software. Our consultants are focused on delivering results with minimum cost and maximum attention to detail, ensuring you get a return on your investment, not just a good-looking set of screens.

It is this distinction that puts Jonas Metals Software ahead of other suppliers who offer generic solutions to the specialist sector.

If you need a system that works for you, not against you... call us today!
