JONAS METALS SOFTWARE

iMetal Logistics

Efficient Logistical and Transport Planning is key to the optimum delivery of high quality services to the exacting requirements of our customers. Maximizing Logistical and Transport resources also has significant impact on costs and profitability.

Jonas Metal Software has developed an all new, fully graphical Logistical and Transport Planning Module – iMetal Logistics to ensure that top class performance is maintained in this crucial area of your business.

LEARN MORE...

LOGISTICS

Transport Planning

iMetal Logistics provides the tools to allow you to plan

- Deliveries to your customers
- Transfers between your warehouses and to Outworkers
- Collections from your Suppliers, Customers and Outworkers
- Share critical information throughout the organization for order progress and logistical management

Logistical Planning

iMetal Logistics provides the tools to allow you to plan

- Receipts – Booking In incoming materials and collections
- Warehouse Capacities and Utilization
- Company Wide Stock Profiles

Dispatach / Shipping

Optimize transportation of order using real time freight monitoring, transportation management

Flexible Transport Planning Tools allow you to automatically register and summarize your Orders, Transfers and Collections by Date and by Area/Route, and to Plan them onto loads. Deliveries, Transfers and Collections can all be handled in the same Load Plans to ensure the optimum usage, both in terms of capacity and cost, of transport resources.

Vehicle parameters for weight and dimension can be set to provide automated warnings for out of parameter loads. Documents bar-coded for integration to warehouse management routines and electronic document management system.

Picking and Transport Documentation

iMetal Logistics provides the full range of Delivery and Logistical Management documentation including:

- **Pick Ticket** – Including Pick Confirmation to ensure accuracy in your stock

- **Loading List** – In reverse drop order and including all loading and packing instructions

- **Vehicle Manifest** – In drop order, including delivery contact and handling details

- **Delivery Notes** – Consolidated Per Drop or Per Order

- **Test Certs** – Interface to iMetal Scan for auto-retrieval of scanned documents

- **Certificate of Conformity**

- **Collection Notes** – Supplier or Outworker Collections and Customer Returns

- **Transfer Notes** – Inter Warehouse or Outworker movements

- **Goods Receipt Notes**

Graphical, Drag & Drop Interface

The iMetal Logistics graphical interface provides the user with easy to use tools that allow Loads to be built by simply dragging Order Items, Transfers or Collections onto the selected vehicle.

The build-up of loads is clearly visible and simple to understand and lends itself to the sharing of information and distribution of tasks throughout the organization. Stops (Drops, Transfers or Collections) or individual Orders can be easily and quickly moved from load to load to ensure the needs of your customers and your own organization are optimally fulfilled.

Our customers don't care how much we know, until they know how much we care

Our client facing team members have many years of experience working in and supplying the metals sector with functionally specific software. Our consultants are focused on delivering results with minimum cost and maximum attention to detail, ensuring you get a return on your investment, not just a good-looking set of screens.

It is this distinction that puts Jonas Metals Software ahead of other suppliers who offer generic solutions to the specialist sector.

If you need a system that works for you, not against you... call us today!
